

Project IV: SOCKS Server (Version 4)

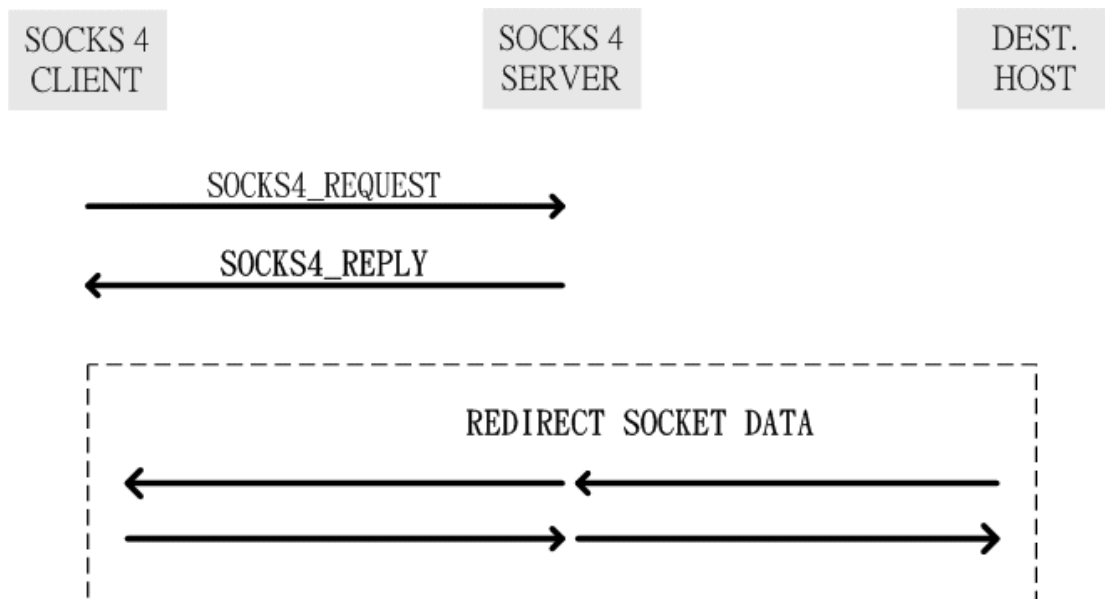

- SOCKS 4 Protocol:
<http://www.socks.nec.com/protocol/socks4.protocol>
- SOCKS 4a Protocol (extension)
<http://www.socks.nec.com/protocol/socks4a.protocol>

In this project, you are asked to implement the SOCKS 4 firewall protocol in the application layer of the OSI model.

SOCKS is similar to a proxy (i.e. intermediary-program) that acts as both server and client for the purpose of making request on behalf of other clients. Because the SOCKS protocol is independent of application protocols, it can be used for many different services: telnet, ftp, www, etc.

There are two types of the SOCKS operations (i.e. CONNECT and BIND). You have to implement both of them.

The following figures show the SOCKS operations:

SOCKS4_REQUEST

VN	CD	DST PORT	DST IP	USER ID	NULL
4	1 or 2				
1	1	2	4	variable	1

VN	CD	DST PORT	DST IP = 0.0.0.x	USER ID	NULL	Domain Name	NULL
4	1 or 2						
1	1	2	4	variable	1	variable	1

[CD]

- 1: CONNECT command
- 2: BIND command

SOCKS4_REPLY

VN	CD	DST PORT	DST IP
0	90 or 91		
1	1	2	4

[CD]

- 90: request granted
- 91: request rejected or failed

[DST IP]

Connect mode: is the DST IP in SOCKS4_REQUEST

Bind mode: 0

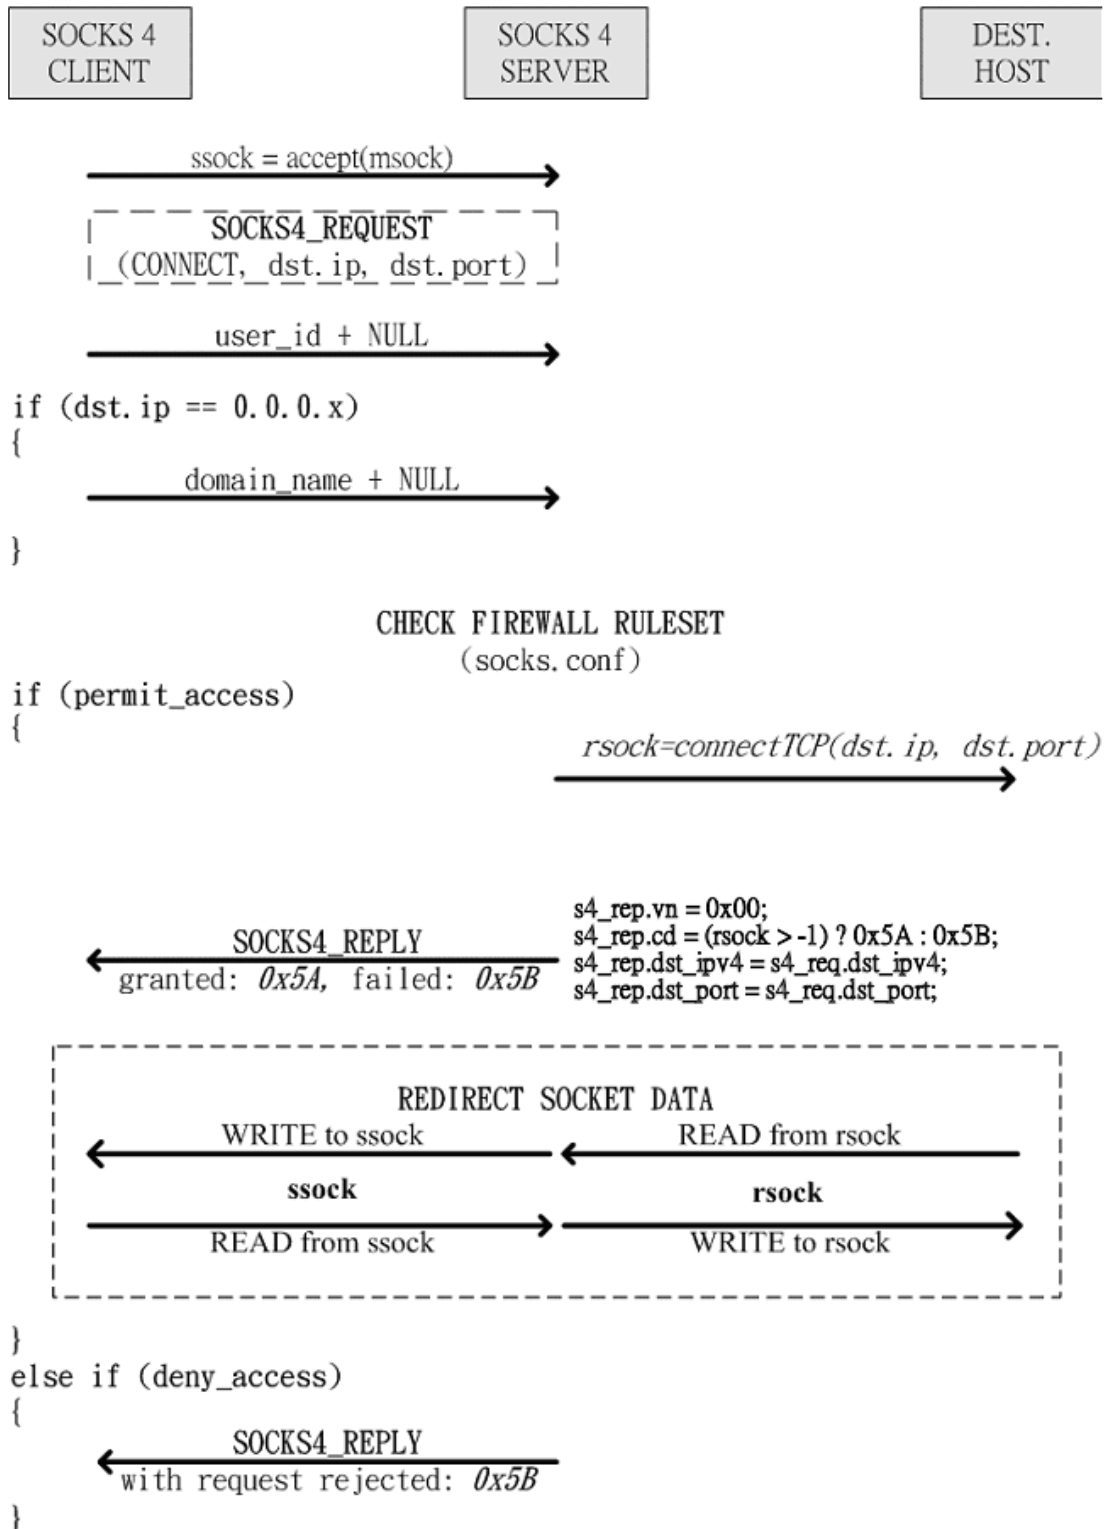

[Port]

Connect mode: is the DST PORT in SOCKS4_REQUEST

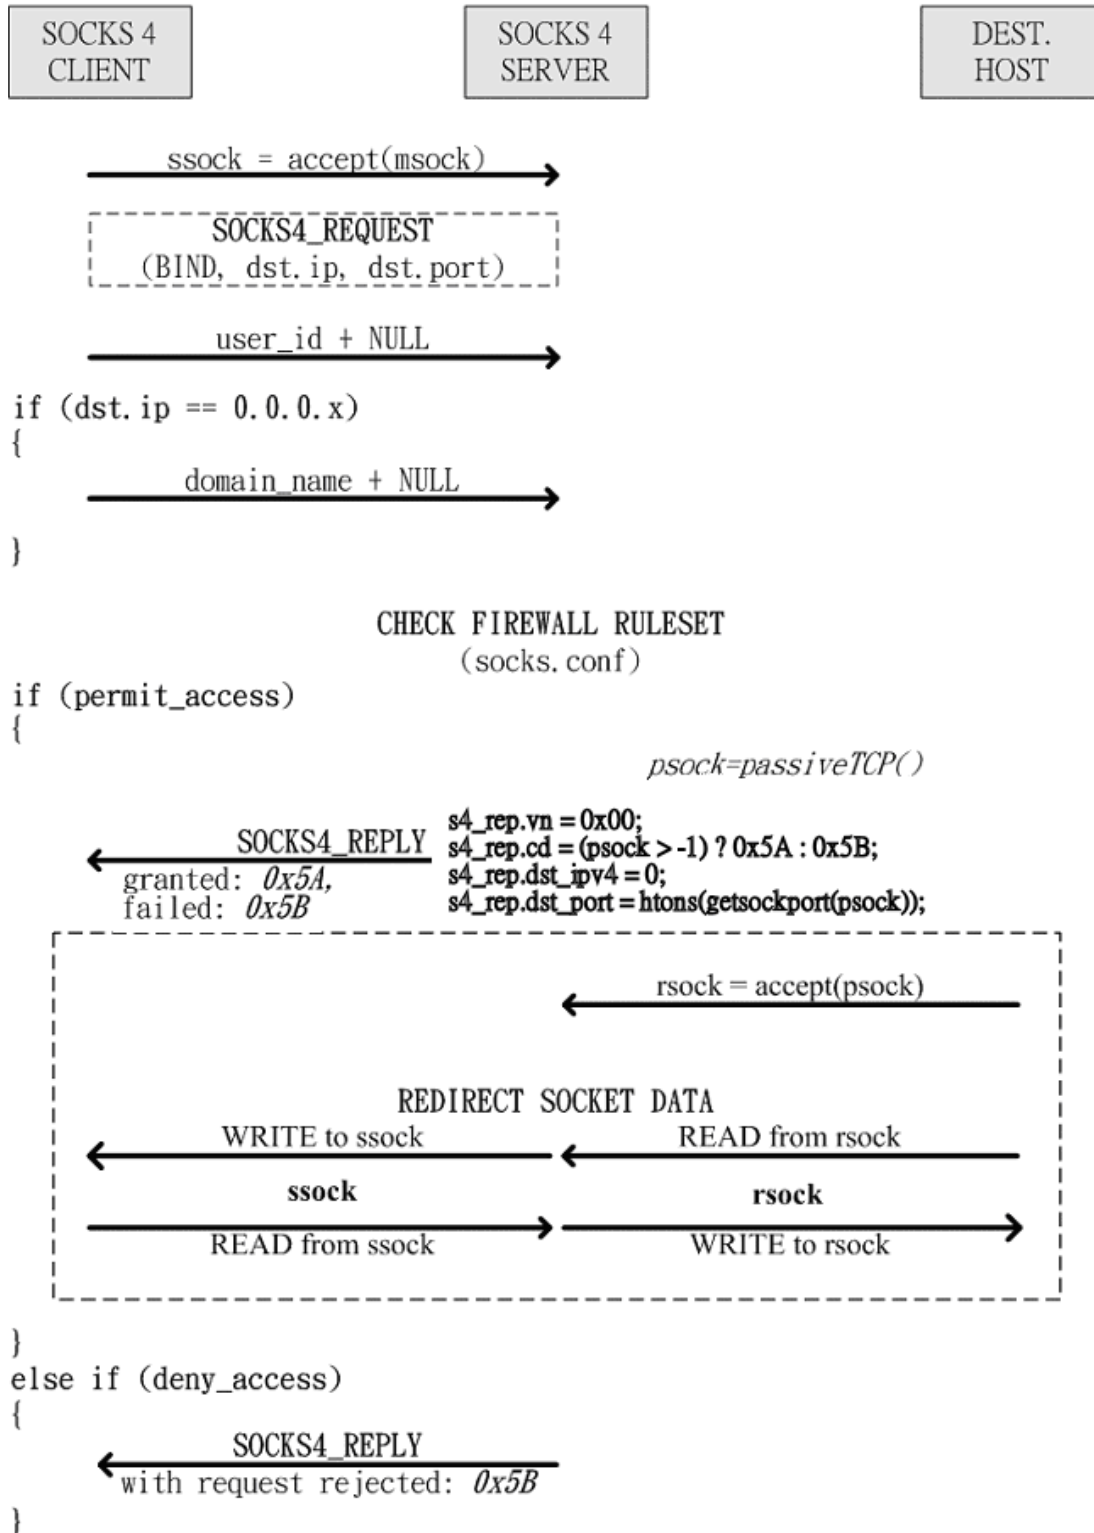

Bind mode: newly binded port in SOCKS server

SOCKS Version 4 Protocol (CONNECT Operation)

SOCKS Version 4 Protocol (BIND Operation)

Project summary:

1. Put the SOCKS client into your CGI program in Project 3 (1).

The web page needs extra fields for SOCKS proxy IP and port for each server.

2. Write a SOCKS server

2.1. CONNECT Operation (use Web Browser or CGI Connection)

[socks.conf] : permit c - - - -

2.2. BIND Operation (use FTP client + normal mode)

[socks.conf] : permit b - - - -

3. Include the firewall rule (use Web Browser) in the server.

[socks.conf] : permit c - - 140.113.*.* # [NCTU only]

or

[socks.conf] : permit c - - 140.114.*.* # [NTHU only]

Additional Requirement:

- Use the concurrent, connection-oriented paradigm.
- Output necessary messages on the screen in the SOCKS server.
